
A First-order DKI per residue
A1-1
S-1
S-2
A1-2
S (DKI = 0.421)
E (DKI = 2.701)
S+E (DKI = 2.683)
R (DKI = 0.186)
local index h_i (Laplace-smoothed)
residue
B Shell scaling with 95% block-bootstrap bands
S: γ = 0.12 [0.05, 0.30]
E: γ = 1.36 [1.30, 1.46]
S+E: γ = 0.88 [0.80, 0.91]
R: excess $\approx$ 0, γ n/a
excess CKI(r) = signal − split null
residues in shell $|S(r)|$ (ordered by distance from the substrate pocket)
C Signal and split-trajectory null (effector)
effector vs apo (half trajectories)
split null, apo halves
split null, effector halves
CKI(r)
residues in shell $|S(r)|$
D Spectral fingerprint $\mathcal{F}_L = \{\Delta\ln\lambda_i, \theta_i\}$
$\Delta\ln\lambda_i$ versus apo
eigenvector rotation θ_i (deg), effector
S: $\Delta\ln\lambda_i$
E: $\Delta\ln\lambda_i$
R: $\Delta\ln\lambda_i$
E: θ_i (deg)
mode index i (covariance eigenvalues, descending)
